KRISHIVOICE

AI-POWERED MULTILINGUAL FARMING ASSISTANT

THE OPPORTUNITY

Farmers regularly need clear, timely guidance on agricultural questions. Digital information can be difficult to access when it is text-heavy or not available in a language and interaction style that feels natural to the user.

THE SOLUTION

KrishiVoice is a voice-enabled, multilingual AI farming assistant that lets users ask agriculture-related questions through speech or text and receive conversational responses. It supports English, Kannada and Hinglish, combining AI-powered question answering with Gnani AI APIs for speech and voice capabilities. The goal is to make digital agricultural guidance more approachable for farmers by enabling interaction in familiar languages and through a natural, hands-free experience.

KEY CAPABILITIES

Multilingual experience English, Kannada and Hinglish interaction.	**Voice-enabled interaction** Speech input and spoken output using Gnani AI APIs.
AI-powered responses Conversational answers to agriculture-related questions.	**Flexible input** Voice and text-based ways to ask questions.

TECHNOLOGY & INTEGRATION

Application backend	Python · Flask
Frontend	HTML · CSS · JavaScript
Voice services	Gnani AI APIs for speech/voice integration
AI layer	LLM-based agricultural question answering

VALUE PROPOSITION

By bringing multilingual AI assistance and voice interaction together, KrishiVoice aims to lower the effort required to seek farming information and make digital support more accessible. It is a practical prototype foundation that can be extended with verified, location-aware agricultural content and expert-reviewed recommendations.
